The creation of AutoCAD Full Crack commands was inspired by the Teletype Model 67, a method of communication still in use today. Commands are given a function name, a keyboard command number, and then a command text. They are typically stored in memory that is mapped to the internal memory of the machine. The command number represents the function of the command, as opposed to the command name which is the text of the command. Commands are stored in a table of functions, as shown in Figure 1. Some pre-existing Teletype commands, such as MoveUp or MoveDown, are mapped to CAD commands. The letters V, F, A, and C are mapped to commands to control the cursor. The letters U, D, L, and R are mapped to commands to change the line style. The letters B, I, and G are mapped to commands to select objects and draw lines.
